

Workshop - ZEISS Celldiscoverer 7

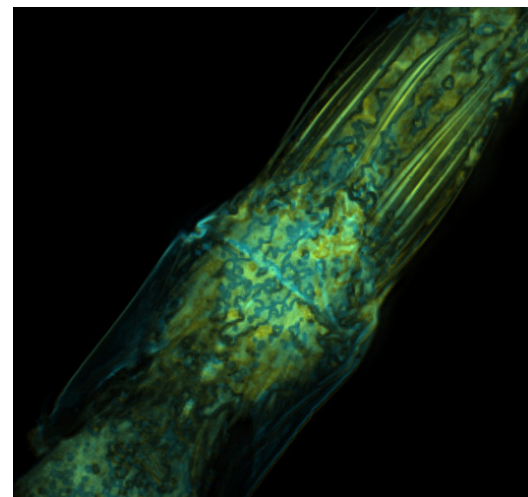

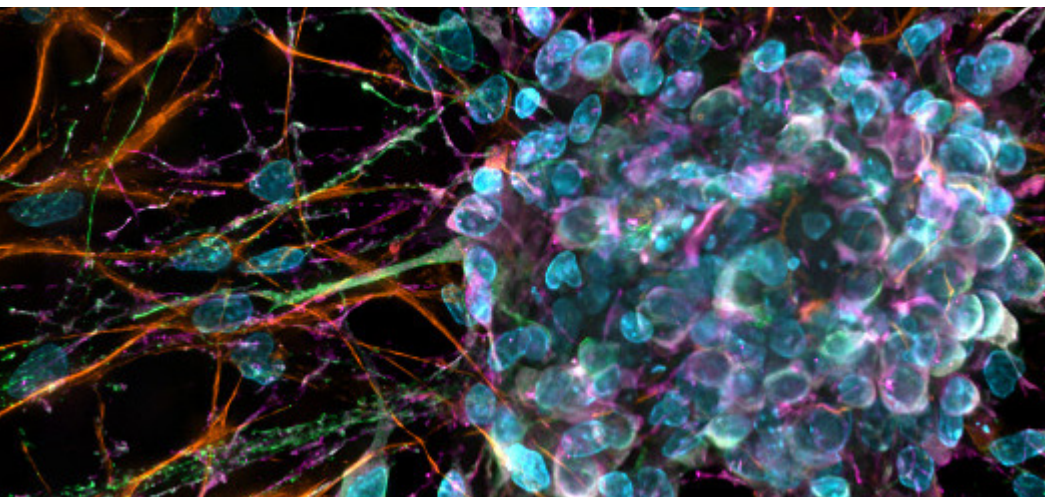

Your Automated Platform for Live Cell Imaging

February 5, 2018 – 11 am

Copenhagen University, CFIM

Room: Faculty club, 16.6.16

ZEISS in collaboration with CFIM and Copenhagen University, is pleased to invite you on February 5 to a workshop focused on automated live cell imaging with the Celldiscoverer 7.

Additionally you have the opportunity to book a demo on February 6 and 7 at Copenhagen University.

With Celldiscoverer 7, you combine the ease-of-use of an automated boxed microscope with the image quality and flexibility of a classic inverted research microscope.

Celldiscoverer 7 calibrates itself, detects and focuses on your samples while the optics adjust themselves.

Whether working with 2D or 3D cell cultures, tissue sections or small model organisms, you will acquire better data in shorter times with this reliable automated live cell imaging platform.

Please, register for the workshop and/or a demo to Maria Trulsson at ZEISS:
maria.trulsson@zeiss.com by January 29.

We hope you will accept this unique opportunity to learn more about Celldiscoverer 7.
